

N-Lited

Informative teaching and dialogue by
visual disabilities through AR/VR

We are:

Visual Consultants and Lighting Advisers from Center for Special Education (CSU) in Slagelse and Developers from Aalborg University.

N-Lited:

With N-Lited, through a Virtual Reality world, you can experience on your own body how it is to live with different viewing difficulties. The VR glasses give you an all-encompassing effect that makes the experience incredibly realistic.

Our visions are:

To create a better dialogue and understanding between people with visual disabilities and their relatives.

To enable professionals to experience visual disabilities through AR / VR in order to get better knowledge and understanding.

Increasing focus on accessibility and giving architects / designers the opportunity to experience the barriers people with visual disabilities experience in everyday life.

User Club:

When you buy N-Lited, you become a member of the Users Club. It is important to note that the technical area is in constant development and you will be an important part of the further development for the product. Once a year there will be a meeting in Slagelse, where developers and members of the Users Club can share experiences and knowledge.
